

WeNext.ai — Complete Platform Documentation

No superadmin content included.

1. GETTING STARTED

Registration and Sign-Up

Users can begin by registering or signing up on WeNext.ai using their preferred authentication method. Once the registration process is completed successfully, the user is granted access to the platform.

Dashboard Access

After logging in, users are redirected to the Dashboard, which serves as the central hub of the WeNext.ai platform.

Dashboard Overview

The Dashboard provides a unified view of all available features and automations within WeNext.ai. From this screen, users can:

- View and access all enabled features
- Explore available automations
- Monitor and manage automation workflows
- Navigate to different sections of the platform efficiently

The Dashboard is designed to give users immediate visibility into platform capabilities and allow quick access to tools and automation setups without unnecessary navigation steps.

Navigation Purpose

The Dashboard acts as the primary navigation point, ensuring users can:

- Easily discover platform functionalities
- Manage automations from a single interface
- Streamline workflows and productivity

=====

==

2. INBOX

=====

==

Inbox

The Inbox is your unified conversation centre. It brings every customer conversation from WhatsApp, Instagram, and Facebook into a single screen so your team can read, reply, assign, and organize chats without switching platforms.

Navigate to: Dashboard --> Inbox

> Channel Tabs

At the top of the Inbox you can switch between channels:

- WhatsApp — Default view of all WhatsApp Business conversations.
- Instagram — Direct messages from your connected Instagram account(s).
- Facebook — Messages from your connected Facebook Page(s).

> Conversation Filters

- All — Every conversation in the selected channel.
- Requested — Customer is waiting for a first response.
- Stepped In — An agent has manually taken over the chat.
- Scheduled — Conversations that have a scheduled message queued.
- Unread — Conversations with messages you haven't opened yet.
- Status / Priority — Filter by status (Active, Archived, Blocked) and by priority (High, Medium, Low).
- Search & Date — Search by contact name, phone number, or message content, and narrow to a date range.

> The Conversation List

Each conversation row shows:

- Contact name or phone number
- A preview of the last message (text, image, video, form, etc.)
- Unread badge (red number) and a priority star if marked
- The assigned agent's avatar and any labels/tags
- The channel icon (WhatsApp / Instagram / Facebook) and any open ticket count

> Replying to a Customer

- Click a conversation in the list — the full chat history opens on the right.
- The conversation is marked as read automatically when opened.
- Type your reply in the message box at the bottom and send.

- Use the action icons to assign the chat to a team member, add labels/tags, set priority, or delete the conversation.

> Business Benefits

- Manage WhatsApp, Instagram, and Facebook conversations from one screen.
- Never miss a customer — unread, requested, and scheduled filters surface what needs attention.
- Route work efficiently by assigning conversations and tagging by priority.

=====

==

3. CAMPAIGNS & TEMPLATES

=====

==

Campaigns

The Campaigns section provides access to communication tools used for outreach and engagement. Within this section, users can manage:

- Message Templates — Create, edit, and manage reusable message formats for campaigns.
- WhatsApp Campaigns — Configure and run WhatsApp-based campaigns using predefined templates to reach audiences efficiently.

To run campaigns, you need to create templates. Go to Message Templates and click Create Template.

Navigate to: Dashboard --> Campaigns

> Messaging Templates — Template Creation Workflow

AI Template Generation

- To use AI Template Generation, enter a prompt describing the message you want to create.
- The AI will automatically generate a template based on the provided input.
- After the template is generated, review it and make any necessary modifications to meet your requirements before saving.

Manual Template Generation

- To create a template manually, enter a template name and select the appropriate template category and layout.
- Define the overall content structure of the template.

Header Configuration

- Click on Header.
- Select the required header format.
- Enter the header text.

Body and Footer Content

- Scroll down and enter the body text and footer text for the template.

Buttons Configuration

- Click on Buttons to view the available button types.
- Select the buttons you want to include in the template.

Template Creation

- After completing all required fields, click Create Template at the bottom-right corner to save the template.

Navigate to: Dashboard --> Templates

> WhatsApp Campaign Creation Workflow

Campaign Name

- Enter a descriptive name for your campaign in the provided field.

Campaign Description

- Provide a detailed description of the campaign, including its purpose, target audience, and any relevant information to help identify or manage it effectively.

Select Template

- Choose the template that corresponds to the campaign name and description.

Campaign Scheduling

- Scroll down and select whether to send the campaign immediately or schedule for later.
- To schedule for later: click Schedule for Later, select the desired date, and specify the appropriate time for delivery.

Retry Failed Recipients

- Enable this option to automatically resend the campaign to recipients whose messages failed to deliver, maximizing reach and engagement.
- First retry attempt: occurs 24 hours after the campaign completion.
- Second retry attempt: occurs 24 hours after the first retry attempt fails.

Select Contacts

- Click Select Contacts — if no contacts are selected, choose the recipients for the campaign.

- Upload your contact list using XLSX, XLS, or CSV format, following the provided template for proper formatting.

Targeting Options

- Choose to Send to all contacts or exclude opted-out users.
- Warning: This campaign includes all contacts, including opted-out users. Messaging opted-out users may violate Meta policy and could result in account suspension.

Segment Contacts (Optional)

- Select a source, board, or tags to organize contacts into specific groups for more targeted messaging.

Finalize and Send

- After configuring all campaign settings, choose to Send Immediately or Schedule for Later.

```
=====
==
4. CUSTOMER — CONTACTS
=====
==
```

Contacts

The Contacts module provides a categorized view of all customer contacts based on their status, priority, and recent activity. It is used to monitor engagement and manage communication workflows.

Navigate to: Dashboard --> Contacts

> Contact Categories

New Contact (Today)

- Definition: Contacts that were created or added to the system on the current date.
- Purpose: Used to identify newly added contacts for onboarding or immediate follow-up.
- Time Scope: Current calendar day.

High Priority

- Definition: Contacts marked as high priority by system rules or manual tagging.
- Purpose: Indicates contacts that require urgent attention or special handling.

Unsubscribed

- Definition: Contacts that have opted out of receiving communications.
- Purpose: Ensures compliance by excluding these contacts from outreach campaigns.

No Activity for Last 30 Days

- Definition: Contacts that have shown no recorded interaction or engagement in the previous 30 days.
- Purpose: Used to identify inactive contacts for re-engagement or cleanup workflows.
- Time Scope: Rolling 30-day period.

> Top Navigation Features

Search Contacts

- Function: Allows searching for contacts using keywords such as name, phone number, email address, or tags.
- Behavior: Updates the contact list dynamically based on the search query.

Filters

- Function: Enables narrowing down the contact list based on predefined criteria such as status, activity, priority, or tags.
- Behavior: Multiple filters can be applied simultaneously.

Import Contacts

- Function: Allows bulk upload of contacts from an external file (e.g., CSV).
- Behavior: Imported contacts are added to the contact list and categorized automatically.

New Contact

- Definition: Displays newly added contact records.
- Scope: Contacts created on the current day or during the current session.

```
=====
==
5. LEADS
=====
==
```

LEAD

The Leads module is used to manage and track inbound leads received through the inbox. It helps monitor lead volume, engagement status, and unread conversations.

Navigate to: Dashboard --> Leads

> Lead Categories

Total Leads

- Definition: The total number of lead records stored in the system.
- Behavior: Includes all leads regardless of status.

New Today

- Definition: Leads created or received on the current calendar day.
- Behavior: Count resets daily.

Active Leads

- Definition: Leads that currently have an active or ongoing interaction.
- Behavior: Updated when lead status changes.

Unread Chats

- Definition: Leads with unread messages in the inbox.
- Behavior: Decreases when messages are read.
- A lead with unread messages must appear in Unread Chats.

=====

==

6. BOARDS

=====

==

Boards

The Boards module allows users to manage contacts using a Kanban-style board layout. Contacts are displayed as cards and organized into columns representing different stages or statuses.

Navigate to: Dashboard --> Boards

Purpose

- Provides a visual workflow for tracking contact progress.
- Enables easy movement of contacts between stages.
- Helps monitor contact status at a glance.

Board Views:

- Dashboard --> Boards (all boards)
- Dashboard --> Boards --> Leads (lead pipeline)
- Dashboard --> Boards --> Customers (customer lifecycle)
- Dashboard --> Boards --> [Board ID] (specific board)

> Create a Board

Step 1: Open Create Board

- Navigate to the Boards or Pipeline section.
- Click on "Create New Board" to open the setup window.

Step 2: Enter Board Details

1. Board Name

- Field to enter the name of the board.
- Example: Sales Pipeline
- This name will be used to identify the board in the system.

2. Description

- Add a short explanation of the board's purpose.
- Example: Track potential deals
- Helps users understand what the board is used for.

3. Linked Automation (Optional)

- Dropdown menu to select an automation flow.
- This links the board with an existing automation for easier task or workflow management.
- This step is optional and can be skipped if no automation is needed.

Step 3: Complete or Cancel

1. Create Board — Click to save and create the board.
2. Cancel — Click to close the window without saving.
3. Close (X) Icon — Located at the top-right corner to exit.

Outcome: Once created, the new board will appear in the boards list and be ready for adding stages, tasks, or records.

=====

==

7. NOTES & TAGS

=====

==

Notes & Tags

Add notes and tags to easily organize and find your contacts.

Navigate to: Dashboard --> Notes & Tags

> Create Notes and Tags

Steps:

- To create tags and notes, navigate to the Customers section, open Notes & Tags, then click New Tag to add a new one.
- Create New Tag: Create a tag to organize your contacts.
- Tag Name: Enter a name for your tag (e.g., Lead, Customer, VIP).

- Tag Color: Choose a color to visually identify this tag.
- Description (Optional): Add any notes or details about this tag.
[Create/Save Tag].

8. AUTOMATIONS

Automations

WeNext.ai Automations help you streamline your workflow and engage with customers effortlessly. Within Automations, you have several options:

- WhatsApp Automations — Send automated messages to customers on WhatsApp based on triggers or schedules.
- WhatsApp Flow — Create interactive WhatsApp conversations to guide customers or collect information.
- Form Submission — Automate actions triggered when a customer submits a form, ensuring quick follow-ups and organized data capture.

These automation tools save time, reduce manual work, and keep your customer interactions consistent and efficient.

> WhatsApp Automations

Engage customers instantly with WhatsApp Automations. Automatically send replies, follow-ups, reminders, and notifications triggered by user actions — so you never miss a conversation.

Get started by navigating to
Dashboard --> Automations --> WhatsApp Automations

Everything You Need to Build Powerful Flows

From one place, you can:

- View and manage all your automation flows
- Explore ready-to-use templates in the Flow Library
- Build smarter conversations with the AI Flow Builder
- Create new workflows in just a few clicks

Track performance at a glance with execution insights like active runs, success rate, and total executions.

Full Visibility & Control

Easily monitor every automation with detailed flow information:

- Flow Name — Identify each workflow

- Status — Know which flows are live
- Triggers — See what starts each conversation
- Runs & Success Rate — Measure performance
- Last Run & Version — Stay up to date
- Actions — Edit, duplicate, or manage flows effortlessly

Automate Conversations That Feel Personal

- Create intelligent auto-replies that activate the moment a user reaches out. Whether someone says "Hi," "Hello," or asks for product or website details, your automation responds instantly — no manual effort required.
- Click Create Flow and design your journey using Triggers, Messaging, User Input, Operations, Logic & Control, and Flow Control.

Visual Flow Builder — Simple & Powerful

Design workflows visually with an intuitive, drag-and-drop interface:

Three Key Areas

- Left Sidebar: All automation building blocks
- Center Canvas: Visual flow design space
- Top Bar: Save, validate, and publish controls

LEFT SIDEBAR — "Search nodes..."

This is your toolbox. You drag items from here into the canvas to build your automation.

TRIGGERS (How the flow starts)

These are entry points.

- Starting Step — Starts when a user sends keywords (like hello, hi, start)
- Webhook Trigger — Starts from an external app/API
- Campaign Button Trigger — Starts when someone clicks a campaign button
- Google Sheet Trigger — Starts when a new row is added in a sheet.

MESSAGING (Messages you send to users)

Used to reply or send content.

- Send Message — Plain text message
- Send Template — WhatsApp-approved template message
- Send Image / Video / Audio / Document — Media messages
- Send List — WhatsApp list-style menu
- WhatsApp Flow — Interactive WhatsApp form
- Send Product / Send Products — Send product(s) from catalog

Use these when you want the bot to talk.

USER INPUT (Collect info from the user)

- User Input — Free text response (name, email, etc.)
- Multiple Choice — Buttons/options user can tap
- Address — Collect user address

Use these when you want the user to reply with data.

OPERATIONS (Actions behind the scenes)

- Send Email — Notify someone via email
- Collect Payment — Take payment (Razorpay etc.)
- Set Stage — Move contact in CRM/Kanban

These don't message the user — they perform actions.

LOGIC & CONTROL (Smart decisions)

- Condition — Create branches (IF/ELSE logic)
- HTTP Request — Connect to external APIs
- Set Tag — Add/remove tags for contacts

This is how your flow becomes intelligent.

Flow Control

- This node terminates the automation. Once the flow reaches this step.
- Think of it like "EXIT" or "CONVERSATION CLOSED"
- Use when: Conversation is completed (order placed, support ticket created, information delivered), User chooses to stop (No thanks, cancel), or After final feedback fallback.

Important Tips

- Always end long flows properly — don't leave paths hanging
- Use clear End Reasons for reporting
- Add a friendly End Message for better user experience
- Don't put this in the middle of a flow unless you truly want it to stop there

CENTER CANVAS — Flow Builder Area

This is where you visually build the journey.

Starting Step (Message Keyword)

Keywords shown: hello, hi, start

When a user sends any of these, the flow begins.

How to add next steps

1. Hover over the green dot under a node
2. Drag from it
3. Drop and choose the next node (message, input, condition, etc.)

Think of it like a flowchart.

TOP BAR — Controls

- Undo / Redo — Reverse actions
- Save — Save draft
- Publish — Make flow live
- Validation — Check for errors in flow
- Ready (status) — Shows flow status

Your flow must be Published to work for real users.

Navigate to: Dashboard --> Automation --> Flows

Flow Builder: Dashboard --> Automation --> Flows --> [Flow ID]

Executions: Dashboard --> Automation --> Flows --> [Flow ID] --> Executions

Runs Monitor: Dashboard --> Automation --> Runs

> WhatsApp Flow

In Dashboard --> Automations, the WhatsApp Flow feature allows you to create automated workflows for WhatsApp.

Create a New Flow

1. Open WhatsApp Flow and click New Flow.
2. You can either:
 - Design the flow manually, or
 - Provide a prompt to the AI, which will automatically generate the flow for you.

Manual Flow Creation

1. Click New Flow to start building a WhatsApp flow from scratch.
2. Assign a name to the flow for easy identification.

Configure Flow Screens

1. Organize the flow screens and select a Start Screen.
2. Assign a name to each screen.
3. To add more screens, click Add Screen to create additional steps in the flow. Example screens: Welcome Screen, Form Screen, Confirmation Screen.

Design Screen Content

1. In the Edit Content section, provide the following:
 - Screen Title: An internal name used to identify the screen within the flow.
 - Screen ID: A unique system identifier, which can be generated automatically or entered manually.
2. Use Content Blocks to add and configure the components displayed on the screen:
 - Body Text: Add instructions or messages for users (for example, "Please enter your details below").
 - Footer: Typically used for action buttons such as Continue, Submit, or Next.
 - Click Add Content to include additional components such as input fields or selection elements.

Save and Publish

1. After completing the flow, save your progress.
2. Once saved, return to the WhatsApp Flow panel.

3. From the three-dot menu, select Open Builder and publish the flow.

Navigate to: Dashboard --> Flows

Flow Builder: Dashboard --> Flows --> Builder

> Form Submission

A form submission is the action where a user completes and submits a form (such as a contact, lead, or inquiry form), and the entered details are captured in WeNext.ai. This data is then stored in the CRM and can trigger automated workflows like WhatsApp messages, lead assignment, or follow-ups.

- Lists recent form submissions with user details.
- Triggers automated WhatsApp messages to leads.
- Creates or updates contacts in the CRM.
- Initiates workflows like message sequences, lead assignment, or team notifications.

Why it matters

This feature connects your lead capture forms (from your website or landing pages) directly to WhatsApp automation so that:

- You don't miss leads — they're instantly captured and entered into your system.
- You can respond faster through automated WhatsApp messages.
- You can trigger workflows like follow-ups, reminders, and CRM updates without manual work.

Navigate to: Dashboard --> Form Data

=====

9. INSTAGRAM AUTOMATION

=====

Instagram Automation Overview

Instagram automation allows you to save time and engage your audience more efficiently by automating repetitive tasks on Instagram. With automation, you can:

- Automatically respond to DMs with predefined messages
- Reply to comments or story mentions instantly
- Capture leads from Instagram interactions
- Trigger follow-up actions, such as sending contact information to your CRM

- Leverage AI to handle repetitive interactions 24/7 without manual effort

WeNext.ai brings WhatsApp and Instagram together, enabling you to capture leads and automate conversations across platforms effortlessly.

Automation Types:

1. Auto Reply DM — Automatically respond to direct messages.
2. Product Automation — Send product details automatically when users comment.
3. Lead Generation — Capture and manage leads via DMs.

Navigate to: Dashboard --> Instagram Automation

Creating a New Automation Step 1:

Configure Auto Reply

- Trigger Keywords: Define the words that will trigger an automatic response.
 - Example: hi, hello, price, info
 - You can add as many keywords as needed.
- Auto Reply Message: The message that will be sent automatically when a trigger keyword is detected.
 - Example: "Thank you for your message! How can I assist you today?"
 - Use {{username}} to personalize the reply for each user.

Once your flow is created, it will appear in the Instagram Automation panel, where you can manage and track all automated interactions.

Instagram Insights

Instagram Insights is a read-only analytics dashboard for your connected Instagram account. It shows reach, followers, engagement, likes, and comments for a chosen period (Today, 7 Days, 28 Days, or All Time), along with your content mix, top-performing post, audience demographics, and the best times to post — so you can understand performance and sharpen your strategy without opening Instagram.

Navigate to: Dashboard --> Instagram --> Insights

Automation Leads

Automation Leads (Captured Leads) is where all the leads collected by your Instagram automation flows are listed. Each lead shows the user's contact details, the flow that captured them, any extra data collected, and a status (Pending, Completed, or Archived). You can search, filter

by flow and date, and export leads to CSV for follow-up.

Viewing Leads

Captured leads can be accessed under the View Leads option in the Instagram Automation panel. You can see:

- Total number of leads
- Lead status: Pending, Completed, or Archived.

Navigate to: Dashboard --> Instagram --> Automation --> Leads

=====

==

10. APPOINTMENTS & SCHEDULING

=====

==

Appointments

WeNext.ai's Appointments feature enables seamless booking, management, and confirmation of meetings directly through WhatsApp and Instagram. It converts customer conversations into real-time scheduled calls, demos, or visits by syncing availability, sending instant confirmations, and automating reminders — eliminating manual follow-ups.

Key Benefits:

- Book appointments directly from WhatsApp & Instagram chats
- Instant confirmations with automated reminders
- AI-powered responses to handle scheduling 24/7
- Reduce no-shows with smart follow-ups
- Track and manage all appointments from one dashboard

Perfect for sales teams, service businesses, clinics, D2C, consultants, and agencies, WeNext.ai helps you convert conversations into scheduled meetings — faster and effortlessly.

The Appointments section in WeNext.ai provides a complete view of your booking workflow, including Overview, Scheduling, Meetings, Availability Slots, and Calendar Integrations. It enables businesses to define availability, and track all appointments from a single, centralized dashboard.

Navigate to: Dashboard --> Scheduling

> Overview

The Overview page gives you a quick snapshot of your appointments, including upcoming meetings, active event types, total bookings, and upcoming bookings grouped by newly created event types.

New Event Types:

New Event Type is a newly created appointment category used to organize and manage specific types of meetings.

Navigate to: Dashboard --> Scheduling Overview

Scheduling Posts

Schedule social media posts for future publishing:

- Set date and time for each post.
- Multi-platform scheduling (Instagram, Facebook, LinkedIn, TikTok, YouTube).
- View scheduled posts in a calendar or list view.

Navigate to: Dashboard --> Scheduling Posts

Time Slots

Configure availability slots for appointments:

- Define available days and hours.
- Set buffer time between appointments.
- Block specific dates or times.

Navigate to: Dashboard --> Time Slots

Meeting Links

Generate and manage meeting links:

- Create shareable booking links.
- Customize link settings (duration, availability, questions).

Navigate to: Dashboard --> Meeting Links

Calendly Integration

Connect your Calendly account:

- Sync Calendly bookings with WeNext.ai.
- Trigger WhatsApp automations on new bookings.

Navigate to: Dashboard --> Calendly

WhatsApp Reminders

Set up automated WhatsApp reminders for appointments:

- Configure reminder timing (e.g., 24 hours before, 1 hour before).
- Customize reminder message templates.
- Automatic sending based on booking data.

Navigate to: Dashboard --> WhatsApp Reminders

Scheduling Contacts

View contacts who have booked appointments:

- List of all bookers and attendees.
- Booking history per contact.

Navigate to: Dashboard --> Scheduling Contacts

Scheduling Integrations

Connect external calendar services:

- Google Calendar sync.
- Other calendar integrations.

Navigate to: Dashboard --> Scheduling Integrations

=====

==

11. ANALYTICS & REPORTS

=====

==

Analytics

The Analytics page provides a comprehensive view of your messaging performance, campaign outcomes, and team activity. It is the central reporting hub for understanding how your business communicates with customers.

Navigate to: Dashboard --> Analytics

> Tabs Available

1. Campaign Analytics

- View delivery, read, and reply rates for each WhatsApp campaign.
- Track sent, delivered, read, failed, and replied counts per campaign.

- Filter by date range (Last 7 days, 30 days, 90 days, 1 year, or custom).
- Identify top-performing campaigns at a glance.

2. Agent Analytics

- Monitor individual team member performance.
- See response times, conversations handled, and messages sent per agent.
- Useful for workload balancing and performance reviews.

3. Template Analytics

- Track which message templates are used most and how they perform.
- View approval status, send count, and engagement per template.

4. AI Insights

- AI-generated summaries and recommendations based on your data.
- Highlights trends, anomalies, and suggested actions.

> Key Metrics on the Dashboard

- Total Conversations — Distinct contacts who messaged you in the selected period.
- Active Conversations — Currently open/active threads.
- Closed Conversations — Resolved threads.
- Average Response Time — Mean time to first reply.
- Message Breakdown — Inbound vs outbound message volume over time.
- Response Time Distribution — Percentage of replies within <5 min, 5-15 min, 15-60 min, 1-4 hrs, 4+ hrs.

Message Reports

Detailed message delivery analytics showing:

- Total messages sent, delivered, read, and failed.
- Delivery and read rates as percentages.
- Breakdown by date, template, or campaign.
- Useful for diagnosing delivery issues and optimizing send times.

Navigate to: Dashboard --> Message Reports

Campaign Performance

Focused analytics for campaign effectiveness:

- Open rates, click rates, and conversion tracking per campaign.
- Compare campaign performance side by side.
- ROI analysis for paid campaigns.

Navigate to: Dashboard --> Campaign Performance

Ads Results

Analytics for your advertising spend and outcomes:

- Ad spend tracking across platforms.
- Leads generated from ads.
- Cost per lead and conversion metrics.

Navigate to: Dashboard --> Ads Results

Sales & Conversions

Revenue and conversion tracking:

- Sales attributed to WhatsApp conversations.
- Conversion funnel visualization.
- Revenue tracking over time.

Navigate to: Dashboard --> Sales & Conversions

=====

==

12. COMMERCE

=====

==

Commerce Dashboard

A summary view of your e-commerce activity within WeNext.ai.

- Total orders, revenue, and average order value.
- Recent order activity and fulfillment status.
- Quick links to products, orders, and reports.

Navigate to: Dashboard --> Commerce --> Dashboard

Commerce Products

Your product catalog synced from Shopify, WooCommerce, or managed directly within WeNext.ai.

- View all products with images, prices, and stock status.
- Sync products from connected e-commerce platforms.
- Send products directly in WhatsApp conversations via the catalog.

Navigate to: Dashboard --> Commerce --> Products

Orders

View and manage all customer orders:

- Order list with status (pending, confirmed, shipped, delivered, cancelled).
- Order details including items, quantities, amounts, and customer info.
- Fulfillment tracking and status updates.
- Filter by status, date range, or customer.

Navigate to: Dashboard --> Orders

Products

Direct product management:

- Create, edit, and delete products.
- Set pricing, descriptions, images, and variants.
- Manage inventory and stock levels.

Navigate to: Dashboard --> Products

Abandoned Carts

Recovery tool for customers who started but didn't complete a purchase:

- List of abandoned cart sessions with customer details.
- Cart contents and total value.
- Send automated WhatsApp recovery messages to bring customers back.
- Track recovery rate and revenue recovered.

Navigate to: Dashboard --> Abandoned Carts

Payments

Payment records and transaction history:

- View all payment transactions with status (captured, pending, failed, refunded).
- Filter by date, amount, or payment gateway.
- Linked to orders and customer records.

Navigate to: Dashboard --> Payments

Store Reports

Sales reports and revenue analytics:

- Daily, weekly, and monthly revenue charts.
- Top-selling products.
- Average order value trends.
- Export reports for accounting.

Navigate to: Dashboard --> Store Reports

Invoices

Generate and manage customer invoices:

- Create invoices linked to orders or standalone.
- Send invoices via WhatsApp.
- Track payment status per invoice.

Navigate to: Dashboard --> Invoices

=====

==

13. INTEGRATIONS

=====

==

Integrations Overview

The Integrations page shows all available third-party connections. Each integration card shows its status (connected/disconnected) and a brief description.

Navigate to: Dashboard --> Integrations

Available integrations:

> Payment Gateways

Razorpay

- Connect your Razorpay account to collect payments via WhatsApp.
- View payment links and transaction history.
- Payments tab: all transactions. Payment Links tab: generated links.
- Used by automation flows (Collect Payment node) and manual payment links.

Cashfree

- Connect Cashfree for payment collection.
- Generate and send payment links via WhatsApp.
- Track transaction history and settlement status.

PayU

- PayU payment gateway integration.
- Payment links, refund management.
- Transaction history and reports.

WhatsApp Payments

- Meta's native WhatsApp payment feature.
- Configure payment settings and supported methods.
- Settings page for gateway configuration.

> E-Commerce

Shopify

- Connect your Shopify store to sync products, orders, and customers.
- Auto-sync products to your WhatsApp catalog.
- Automated messages for order confirmations, shipping updates.
- Sync controls: manual or automatic sync intervals.

WooCommerce

- Connect your WooCommerce store.
- Product and order sync similar to Shopify.
- Automated messages on order events.
- Webhook-based real-time sync.

Petpooja

- Restaurant POS integration for food ordering via WhatsApp.
- Menu sync from Petpooja POS to WhatsApp catalog.
- Order management with real-time status updates.
- Automated order confirmation and delivery notifications.
- Navigate to: Dashboard --> Petpooja (dashboard) or Petpooja --> Orders.

> Delivery

Uber Direct

- Delivery integration for last-mile fulfillment.
- Create delivery requests directly from orders.
- Track delivery status in real time.

> Data & Productivity

Google Sheets

- Sync contact data, form submissions, or campaign results to Google Sheets.
- Two-way sync: changes in Sheets can trigger automations.
- Google Sheets Data page: view imported/synced data.

Custom API

- Build custom integrations using webhooks and API endpoints.
- Configure authentication, headers, and payload formats.
- Trigger automations from external systems.

> Advertising

Google Ads

- Connect your Google Ads account.
- View and manage campaigns.
- Track ad performance and conversions.

Lead Ads Sync

- Sync leads from Meta Lead Ad forms directly into WeNext.ai.
- Auto-import leads as contacts with all form field data.
- Trigger automated follow-up workflows.

=====

==

14. SOCIAL MEDIA

=====

==

Social Accounts

Central hub for connecting and managing all your social media accounts:

- Instagram Business accounts
- Facebook Pages
- LinkedIn profiles and company pages
- TikTok accounts
- YouTube channels

Each account shows connection status, follower count, and quick actions.

Navigate to: Dashboard --> Social Accounts

Social Inbox

Unified inbox for all social media messages:

- View and reply to Instagram DMs, Facebook messages in one place.
- Assign conversations to team members.
- Apply labels and tags for organization.

Navigate to: Dashboard --> Social Inbox

Social Media Posts

Create, schedule, and publish posts across multiple platforms:

- Draft posts with text, images, and videos.
- Schedule for future publishing.
- Publish to Instagram, Facebook, LinkedIn, TikTok, and YouTube simultaneously.
- View post performance after publishing.

Navigate to: Dashboard --> Social Media --> Posts

Create Post: Dashboard --> Social Media --> Posts --> Create

Global Create: Dashboard --> Social Media --> Posts --> Create Global

Instagram Posts

Dedicated Instagram post management:

- Create and publish Instagram posts (single image, carousel, reels).
- AI Image Generation: generate images using AI for your posts.
- Schedule posts for optimal times.
- View engagement metrics per post.
- Manage AI descriptions for automation grounding.

Navigate to: Dashboard --> Instagram --> Posts

Instagram Inbox

Instagram DM management:

- View all Instagram direct messages.
- Reply to customer DMs directly from WeNext.ai.
- AI-powered auto-replies for common queries.

Navigate to: Dashboard --> Instagram --> Inbox

Instagram Orders

Orders captured through Instagram interactions:

- View orders placed via Instagram DMs or automation flows.
- Track order status and fulfillment.

Navigate to: Dashboard --> Instagram --> Orders

Instagram Broadcasts

Send broadcast messages to your Instagram audience:

- Create broadcast campaigns targeting followers.

- Schedule broadcasts for optimal engagement.

Navigate to: Dashboard --> Instagram Broadcasts

Instagram Automation (Visual Flow Builder)

In addition to the wizard-based automation (Section 9), WeNext.ai offers a visual drag-and-drop flow builder for Instagram automations:

- Create complex multi-step flows visually.
- Nodes: Starting Trigger, Send DM, Send Quick Reply, Send Template, Wait, Condition, and more.
- AI Toggle: Enable AI-powered comment replies and DM responses per node.
- Flow analytics: track performance of each flow.

Navigate to: Dashboard --> Automation --> Instagram (flow list)

Builder: Dashboard --> Automation --> Instagram --> [select flow]

Analytics: Dashboard --> Automation --> Instagram --> [flow] --> Analytics

Facebook Posts

Create and manage Facebook page posts:

- Draft, schedule, and publish posts to connected Facebook Pages.
- View engagement and reach per post.

Navigate to: Dashboard --> Facebook --> Posts

Facebook Accounts

Manage connected Facebook Pages:

- Connect/disconnect Facebook Pages.
- View page details and settings.

Navigate to: Dashboard --> Social Media --> Facebook

Facebook Automation Flows

Create automation flows for Facebook interactions:

- Auto-reply to Facebook comments and messages.
- Build visual flows with the drag-and-drop builder.
- Track flow performance with analytics.

Create New: Dashboard --> Automation --> Facebook --> New

Edit Flow: Dashboard --> Automation --> Facebook --> [Flow ID]

Analytics: Dashboard --> Automation --> Facebook --> [Flow ID] --> Analytics

LinkedIn Posts

Manage LinkedIn content:

- Create and publish posts to LinkedIn profiles or company pages.
- Schedule posts for optimal engagement.

Navigate to: Dashboard --> LinkedIn --> Posts

LinkedIn Accounts

Manage connected LinkedIn accounts:

- Connect LinkedIn profiles and company pages.
- Select which account to post from.

Navigate to: Dashboard --> Social Media --> LinkedIn

Account Selection: Dashboard --> Social Media --> LinkedIn --> Select Account

TikTok

TikTok account management:

- Connect TikTok accounts.
- View account details and content.

Navigate to: Dashboard --> Social Media --> TikTok

YouTube

YouTube channel management and content tools:

Channel Management

- Connect and manage YouTube channels.

Navigate to: Dashboard --> YouTube

Content (Videos)

- View and manage uploaded videos.

Navigate to: Dashboard --> YouTube --> Content

Comments

- Monitor and reply to YouTube comments.
- AI-powered comment management.

Navigate to: Dashboard --> YouTube --> Comments

Insights

- YouTube analytics: views, subscribers, engagement.

Navigate to: Dashboard --> YouTube --> Insights

Automation

- AI reply settings for YouTube comments.
- Configure automated responses.

Navigate to: Dashboard --> YouTube --> Automation

15. META ADS (CTWA — Click-to-WhatsApp)

=====

==

Meta Ads Dashboard

Create and manage Meta (Facebook/Instagram) ad campaigns that drive customers to WhatsApp conversations.

Navigate to: Dashboard --> Ads

> Setup

Connect your Meta ad account and configure permissions.

Navigate to: Dashboard --> Ads --> Setup

> Create Ad

Build a new Meta ad with targeting, budget, and creative.

Navigate to: Dashboard --> Ads --> Create

> AI Ad Builder

Use AI to generate ad creatives, copy, and targeting suggestions.

Navigate to: Dashboard --> Ads --> AI Builder

> Leads

View leads captured from Meta Lead Ad forms.

Navigate to: Dashboard --> Ads --> Leads

> Ad Attribution

Track which ads are driving WhatsApp conversations and conversions.

Navigate to: Dashboard --> Ads --> Attribution

> Campaign Detail

Drill into a specific campaign to see ad sets and performance.

Navigate to: Dashboard --> Ads --> Campaign --> [Campaign ID]

> Ad Set Detail

View individual ads within an ad set.

Navigate to: Dashboard --> Ads --> Ad Set --> [Ad Set ID]

> Individual Ad Detail

Performance metrics for a single ad.

Navigate to: Dashboard --> Ads --> Meta --> [Ad ID]

WhatsApp Ads

Manage WhatsApp-specific ad campaigns.

Navigate to: Dashboard --> WhatsApp Ads

Competitor Ads

Analyze competitor advertising activity:

- Search and view competitor ad creatives.
- Track competitor ad spend and positioning.

Navigate to: Dashboard --> Competitor Ads

=====

==

16. LINKEDIN ADS

=====

==

LinkedIn Ads Manager

Create and manage LinkedIn advertising campaigns.

Navigate to: Dashboard --> LinkedIn Ads

- > Setup — Connect your LinkedIn ad account.
- > Create — Build a new LinkedIn ad campaign.
- > Campaign Detail — View performance of a specific campaign.
- > Edit Campaign — Modify an existing campaign.
- > Analytics — LinkedIn Ads performance analytics.
- > Ad Library — Browse and manage LinkedIn ad creatives.
- > Events — LinkedIn Events management.
- > Verified — LinkedIn Verified Page status.

=====

==

17. TIKTOK ADS

=====

==

TikTok Ads Dashboard

Manage TikTok advertising campaigns and view performance.

Navigate to: Dashboard --> TikTok Ads

=====

==

18. AI AGENTS

=====

==

AI Agents Management

Create and manage AI-powered customer service agents that can answer questions based on your business data.

Navigate to: Dashboard --> AI Agents

> Creating an AI Agent

1. Click "Create Agent" to set up a new AI agent.
2. Configure the agent name, greeting message, and behavior.
3. Train the agent using data sources.

> Data Sources (Training)

Train your AI agent using multiple data source types:

Website — Crawl your website pages to extract knowledge.

- Enter your website URL.
- The agent learns from your site content automatically.

Files — Upload documents (PDF, DOC, TXT) for the agent to learn from.

- Drag and drop or browse to upload files.
- Supported formats: PDF, DOCX, TXT.

Q&A — Manually add question-answer pairs.

- Add specific questions and their ideal answers.
- Best for FAQs and precise responses.

Channels — Connect the agent to communication channels.

- Deploy the agent on WhatsApp, website widget, or other channels.
- Configure which channels the agent responds on.

> Chat Preview

Test your AI agent in a live preview chatbox:

- Send test messages and see how the agent responds.
- View response source and confidence score.
- Link buttons from the agent's knowledge base appear as clickable buttons.

Navigate to: Dashboard --> AI Agents --> [Agent ID]

Chatbot

Configure chatbot settings and behavior:

- Set up automated chatbot responses.
- Define conversation flows and fallback behaviors.

Navigate to: Dashboard --> Chatbot

WhatsApp AI Agent

Dedicated WhatsApp AI agent management and configuration.

Navigate to: Dashboard --> WhatsApp AI Agent

=====

==

19. NEXUS AI (GenUI)

=====

==

Nexus AI Workspace

An AI-powered assistant workspace for your business. Chat with the AI to get help with various tasks:

- Ask questions about your business data.
- Get AI-generated insights and recommendations.
- View interactive tool cards with actionable results.

Navigate to: Dashboard --> Nexus AI (GenUI)

=====

==

20. TEAM & COLLABORATION

=====

==

Team Management

Manage your team members, roles, and permissions:

> Team Members List

- View all team members with their roles and status (active/inactive).
- See each member's email, role, and last activity.

> Invite a Team Member

1. Click "Invite Member".
2. Enter the team member's email address.
3. Select their role: Admin, User, or Agent.
4. Set menu permissions (which sections they can access).
5. Send the invitation.

> Roles

- Admin — Full access to all features and settings.
- User — Access to most features except admin-only settings.
- Agent — Limited access, primarily inbox and assigned conversations.

> Menu Permissions

Admins can customize which sidebar sections each team member can access. This includes per-integration permissions (e.g., grant access to Shopify but not Razorpay).

Navigate to: Dashboard --> Team Management

Team Chat

Internal team communication:

- Real-time messaging between team members.
- Organized by channels and direct messages.
- Share files, images, and links.
- Star important messages for quick reference.
- Forward messages between conversations.

Navigate to: Dashboard --> Team Chat

=====

==

21. TICKETS

=====

==

Tickets

Customer support ticket management:

- Create and track support tickets for customer issues.
- Assign tickets to team members.
- Set ticket status and priority.
- Link tickets to customer conversations.
- Filter by status (open/closed), priority, or assignee.

Navigate to: Dashboard --> Tickets

Manage Ticket Statuses

- Customize the status workflow for your ticket system.
- Add, edit, or remove ticket status labels.

Navigate to: Dashboard --> Tickets --> Statuses

```
=====
==
22. CRM — ADDITIONAL FEATURES
=====
==
```

Segments

Create customer segments for targeted messaging:

- Define segments based on contact attributes, behavior, or tags.
- Use segments in campaigns for precise targeting.
- Dynamic segments update automatically as contacts match criteria.

Navigate to: Dashboard --> Segments

Chat History

Browse and search through all conversation history:

- Search across all conversations by keyword, contact, or date.
- View full message threads.
- Export chat logs.

Navigate to: Dashboard --> Chat History

```
=====
==
23. SETTINGS
=====
==
```

Settings

Central configuration hub for your account and organization.

Navigate to: Dashboard --> Settings

> Available Tabs

Profile

- Update your name, email, avatar, and personal preferences.

Organization / Workspace

- Organization name, logo, and details.
- Workspace-level configurations.

Security

- Change your password.
- Two-factor authentication settings.
- Session management.

Notifications

- Configure notification preferences.
- Choose which events trigger notifications (email, push, in-app).

Theme

- Switch between light and dark mode.
- Customize appearance settings.

AI Knowledge

- Set up your organization's AI knowledge base.
- Add business name, website, Instagram handle, services offered, support contact details, and free-form notes.
- This information is used by all AI features (Instagram AI automation, AI agents) to generate accurate, grounded replies.
- Admin-only for editing; all team members can view.

Campaigns

- Campaign-specific settings and defaults.

=====

==

24. CALL LOGS

=====

==

Call Logs

View all inbound and outbound voice call activity:

- Call history with timestamps, duration, and status.
- Caller/callee details.
- Call recordings (when available).
- Filter by date, direction, or status.

Navigate to: Dashboard --> Call Logs

```
=====
==
25. BUSINESS ACCOUNTS
=====
==
```

Business Accounts

Manage your WhatsApp Business accounts:

- View all connected business accounts.
- Connect new accounts via the Meta Business Suite.
- Edit account details (display name, profile picture, about text).
- View API keys and webhook configuration.
- Set the default business account for operations.

Navigate to: Dashboard --> Business Accounts

```
=====
==
26. BILLING
=====
==
```

Billing

Manage your subscription and payment details:

- View your current plan and features.
- Upgrade or change your subscription plan.
- View billing history and invoices.
- Update payment method.

Navigate to: Dashboard --> Billing

```
=====
==
27. AUDIT LOG
=====
==
```

Audit Log

Track all user actions within your organization:

- View a chronological log of all changes and actions.
- Filter by user, action type, resource, or date range.
- Each entry shows: user, action, resource, timestamp, IP address.
- Toggle "Hide system events" to focus on user-initiated actions.
- Useful for security reviews and compliance.

Navigate to: Dashboard --> Audit Log

=====

28. SHORT LINKS

=====

Short Links

Create and manage shortened URLs:

- Generate short links for sharing.
- Track click counts and analytics per link.
- Useful for campaigns and WhatsApp messages.

Navigate to: Dashboard --> Short Links

=====

29. WEBSITE BUILDER

=====

Website Builder

Build and manage websites directly within WeNext.ai:

> Dashboard

- View all your sites.
- Create new sites.
- Manage existing sites (edit, publish, delete).

Navigate to: Dashboard --> Website Builder

> Page Editor

- Drag-and-drop visual page editor (GrapesJS-based).

- Add sections, text, images, forms, and custom components.
- Mobile-responsive design tools.
- Preview and publish directly.

Navigate to: Dashboard --> Website Builder --> Sites --> [Site] --> Editor --> [Page]

=====

==

30. LIVE CHAT

=====

==

Live Chat

Set up website chat widgets for real-time customer conversations:

> Channels Overview

- View all configured chat widget scripts.
- Create new chat widgets.
- Customize widget appearance and behavior.

Navigate to: Dashboard --> Live Chat

> Widget Configuration

- Customize the chat widget colors, position, and greeting.
- Set auto-reply messages and business hours.
- Generate the embed code for your website.

Navigate to: Dashboard --> Live Chat --> [Script ID]

=====

==

31. DATA STORES

=====

==

Data Stores

Create and manage structured data sources:

- Define custom data schemas.
- Store and organize business data.
- Use data in automations and AI agent responses.

Navigate to: Dashboard --> Data Stores

> Data Store Detail

- View all records in a data store.
- Add, edit, or delete records.
- Configure schema (fields and types).

Navigate to: Dashboard --> Data Stores --> [Store ID]

=====

==

32. NOTIFICATIONS

=====

==

Notifications

View and manage all your notifications:

- In-app notification feed.
- Notification preferences and settings.
- Mark as read/unread.
- Click to navigate to the relevant page.

Navigate to: Dashboard --> Notifications

=====

==

33. HELP & SUPPORT

=====

==

How to Use

- Product usage guide page.

Navigate to: Dashboard --> How to Use

Help Articles

- Help center articles list.

Navigate to: Dashboard --> Help Articles

Raise Ticket

- Support ticket submission page.

Navigate to: Dashboard --> Raise Ticket

Contact Support

- Contact support page (reach support team).

Navigate to: Dashboard --> Contact Support

=====

==

34. AGENCY PORTAL

=====

==

Agency Dashboard

For agency partners managing multiple client organizations:

- Overview of all managed organizations.
- Key metrics across all clients.

Navigate to: Agency --> Dashboard

Organizations

- View and manage client organizations.
- Access client details and plan status.

Navigate to: Agency --> Organizations

Compensations

- Track agency commissions and compensation.
- View payment history and pending amounts.

Navigate to: Agency --> Compensations

Agency Settings

- Configure agency account settings.

Navigate to: Agency --> Settings

=====

==

35. WHATSAPP REMAINDERSE

=====

==

WhatsApp Reminders

Automate client notifications and

minimize no-shows by configuring

automated messaging workflows

triggered by upcoming scheduled

appointments.

Navigate to: Dashboard -->

Scheduling --> WhatsApp

Reminders

Reminder Configurations

- Set up automated triggers to dispatch messages at specific intervals (e.g., 24 hours or 1 hour before appointments).

Template Selection

- Customize message layouts and map dynamic variables such as client names, appointment dates, and booking links.

Logs & Monitoring

- Track message statuses, review delivery rates, and check manual override logs for audit purposes.

=====

==

36. FORGOT PASSWORD

=====

==

Forgot Password

Provide a secure and seamless self-

service recovery flow for users who
have lost access to their accounts.

Navigate to: Public Page

([http://localhost:8080/forgot-](http://localhost:8080/forgot-password)
password)

Account Recovery Request

- Allow users to enter their
registered email address to
initiate the verification and
recovery pipeline.

Password Reset Link

- Handle automated email
notifications, generation of
verification tokens, and
enforcement of link expiration
rules.

Updating Passwords

- Enforce secure selection
criteria for new credentials
and handle successful
redirection back to the login
screen.

Centralize user assistance by offering
a multi-channel support center
directly within the platform.

Navigate to: Dashboard --> How to

Use Navigate to: Dashboard -->

Help Articles Navigate to:

Dashboard --> Raise Ticket

Navigate to: Dashboard --> Contact
Support

Knowledge Base & Articles

- Allow users to browse
trending topics, search
documentation, and follow
interactive walkthrough
guides.

Raising Support Tickets

- Capture user issues using
structured fields such as
Subject, Category, Severity,
and Detailed Description for
automated routing.

Support Pipeline

- Monitor active ticket statuses
(Open, Pending, Resolved),

review historical logs, and
access direct conversation
links.

=====

==

38. SOCIAL ACCOUNTS

=====

==

Manage third-party social media
integrations to streamline cross-
platform publishing and analytics.

Navigate to: Dashboard --> Settings -
-> Social Accounts (or
c/home/social-accounts)

Connection Dashboard

- View and manage connected
instances across supported
networks including
Instagram, Facebook,
LinkedIn, and TikTok.

Authorization Flow (OAuth)

- Handle secure external
authentication via verification
popups, permission prompts,
and webhook registration.

Account Management

- Toggle active business pages, synchronize subscriber lists, and completely disconnect integrations when necessary.

=====

==

39. TEAM MANAGEMENT

=====

==

Administer organizational workspaces

by regulating member access, defining roles, and overseeing user profiles.

Navigate to: Dashboard --> Settings -

-> Team Management

User Roles

- Assign and enforce global permission boundaries across core roles: Admin, Agency User, Agent, and Standard User.

Inviting Members

- Dispatch secure onboarding links, pre-assign baseline roles, and monitor invite statuses (Invited, Active).

Access Permissions

- Apply granular restrictions to specific interfaces, such as locking down sensitive integration setup tabs.

Profile Management

- Modify user metadata, trigger administrative password resets, and offboard members by removing accounts.

```
=====
==
40. NEXUS AI
=====
==
```

Leverage the platform's native generative AI core to build, execute, and monitor advanced automation workflows.

Navigate to: Dashboard --> Nexus AI
(or c/home/genui)

GenUI Workspace

- Interact with generative features via a persistent

floating widget overlay or
expand to a full-page canvas
workspace.

Tool Calls & Interactive Cards

- List and build custom prompt templates, execute automated marketing campaigns, query platform analytics, and fire UI navigation triggers.

Domain-Specific Agents

- Access specialized capabilities via the 10 sidebar assistants tailored for commerce, data analytics, automation, and more.

Verification Pipeline

- Safeguard system operations with mandatory Accept/Cancel confirmation dialogs before executing any data-modifying mutations.
