SUMMARY

Data-oriented Computer Science undergraduate at SRM University, AP with experience in analyzing structured datasets and deriving insights to support data-driven decision making. Demonstrated ability to apply a business, risk, and controls lens to data problems, with exposure to financial and transactional data analysis. Comfortable collaborating with technical and non-technical stakeholders and translating analytical findings into actionable recommendations.

EDUCATION

2022 - 2026 B.Tech CSE at **SRM University AP** (GPA: 8.11/10.0)

WORK EXPERIENCE

Frontend Developer Intern : Edunet Foundation (Remote) Jun 2024 - Aug 2024 · 3 mos

- Designed and enhanced responsive user interfaces for web applications with focus on usability and performance.
- Developed a food delivery platform enabling menu navigation, order placement, real-time order status tracking, and secure user authentication.
- Implemented backend validation logic to ensure reliable transaction workflows and consistent order processing.

Artificial Intelligence Intern : SKOLAR (Remote) Feb 2024 - Apr 2024 · 3 mos

- Implemented machine learning models for stock price prediction using historical financial time-series data.
- Built an LSTM-based forecasting model and evaluated performance against Random Forest, SVM and other models.
- Performed data preprocessing and model evaluation to assess predictive reliability across different approaches.

PROJECTS

Credit Card Fraud Detection System (Python, SQL, Machine Learning)

Analyzed transactional financial data to identify fraud patterns and anomalies. Applied RBF-based classification with focus on **risk mitigation and control mechanisms**. Addressed class imbalance and evaluated model performance using ROC-AUC, aligning outcomes with real-world banking fraud scenarios.

Bank Management System (C++, RDBMS Concepts)

Designed a core banking simulation system managing customer accounts, transactions, and balances. Implemented business rules for deposits, withdrawals, and transaction validation, reinforcing concepts of **authoritative data sources, transaction consistency, and auditability**.

Expense Tracker and Analytics Dashboard (Django, SQL, Python)

Developed an expense management system with automated reporting and visual analytics. Generated insights on spending trends and categories to support data-driven decision making. Designed normalized schemas ensuring **data accuracy, lineage, and integrity**.

E-commerce Database Management System (MySQL)

Designed and implemented a fully normalized relational database supporting inventory control, order processing, and customer data management. Strengthened understanding of **data modeling, referential integrity, and RDBMS concepts**.

Stock Price Analysis and Forecasting (Python, SQL, LSTM)

Performed time-series analysis on historical stock data to uncover trends and correlations. Compared forecasting approaches including LSTM, ARIMA, and traditional ML models to evaluate reliability of analytical outputs.

YouTube Sentiment Analyzer (BERT, Python)

Built an NLP pipeline to analyze large-scale textual datasets and classify sentiment. Focused on preprocessing, model evaluation, and extracting actionable insights from unstructured data.

Food Volume Estimation Using Instance Segmentation (Research Project)

Proposed a single-image food volume estimation approach combining instance segmentation with plate-based scale inference. Utilized Hough Circle detection and adaptive size priors to improve robustness across real-world food images.

SKILLS

Programming & SQL:	C, C++, Python, Java, SQL
Data Analysis & Visualization:	NumPy, Pandas, Matplotlib, Model Evaluation (ROC-AUC, Confusion Matrix)
Databases & Modeling:	MySQL, MongoDB, Relational Database Design, Normalization, RDBMS Concepts
Machine Learning & AI:	Machine Learning, Deep Learning, Scikit-learn, TensorFlow, Keras, LSTM, CNN, BERT, RBF, Instance Segmentation
Web Development:	HTML, CSS, JavaScript, Bootstrap, PHP, Django
Core CS Concepts:	Data Structures and Algorithms, Database Management Systems, Computer Networks, Software Engineering, Operating Systems

CERTIFICATIONS

- **Python Certification** – NPTEL, IIT Madras
- **Managerial Skills for Interpersonal Development** – NPTEL, IIT Madras
- **Google: Foundations of Cybersecurity** – Coursera
- **AWS Certification** – Amazon Web Services, Coursera
- **Introduction to MongoDB** – MongoDB, Coursera
